

Ethic obligations of Authors

1. The basic duty of author consists in giving the exact description of the conducted research, and also objectively present its scientific novelty and practical meaningfulness.
2. The authors of articles carry all responsibility for maintenance of the articles and fact of their publication.
3. Every author is under an obligation to use reasonably and economy the volume of Collection, as it is the limited resource.
4. Primary report about the results of a research must be complete enough and contain necessary references to the accessible information generators, that specialists in this area were able to recreate this experiment.
5. An author must necessarily quote those publications which carried out qualificatory influence on the essence of scientific problem, and also those of them, which can provide the operative acquaintance of reader with previous works of scientists, important for understanding of this research. Except for reviews, an author must minimize quoting of works, which do not have direct attitude toward maintenance of the article. An author is under the obligation to conduct a scientifically-literary search, to find and quote original publications, in which are described the researches, closely associated with his article. He also must properly allude to the sources of fundamentally important materials, used in this work (if these materials were not got an author), on the manuscripts of
6. In a manuscript are registered clearly any dangerous displays and risks which are related to the researches conducted by an author.
7. An author should avoid fragmentation of reports about a research. A scientist which executes multivectorial researches of the system or group of the family systems must structure a publication in a way, that every fragment of description of the advanced study provide a fully complete report on every aspect of global analysis of a scientific problem.
8. At presentation of manuscript to the publication an author must inform the editor of existent cognation of these materials with his articles, presented to printing by other publishing houses or accepted by them. The copies of these manuscripts appear to the editor with pointing of connections with a manuscript, presented to the publication in other journal.
9. An author has no right to give manuscripts which describe the same results, more than in one journal as a primary publication, if it isn't only the one, resubmitting of declined by Collection or the manuscript recalled by an author. It is possible to present the manuscript of the complete new article which extends the published thumb-nail previous sketch of the same research done before. However, at presentation of such manuscript it is necessary to inform an editor about the existence of the previous article which necessarily must be quoted by an author in this new manuscript.
10. An author must clearly name all sources of quoted or given in the article information, except for well-known facts. Information, got by him in the private

order (in the process of conversation, at correspondence or during a discussion with the third parties) from other researcher, can not be used or presented in work of this author without a permission of the research worker, from whom this information became known to him. Information, got at offering of confidential services (at criticizing of manuscripts or projects, presented for the receipt of grants), is similarly used only with permission of an author.

11. The personal criticism of the research workers can not be considered appropriate not under any circumstances. However, in the published articles there can be criticism of materials of experimental or theoretical research in corresponding situations.
12. The co-authors of the article must be only those persons who did a considerable scientific contribution to the given work and divide responsibility for the got results. As an author or co-author it is impossible to name the fictitious names. An author who gives a manuscript to the publication bears the responsibility for including into the list of co-authors all those and only those persons who answer the requirements of authorship. In article, written by a few authors, the authors, who gives pin information to the release, documents and carries out the correspondence with editors, undertakes responsibility for the consent of other authors of the article to its publication in Collection.
13. Authors necessarily must reveal to the editor of Collection the information about any potential conflict of interests, like corporate, consulting or financial interests of some company and others like that, on which would influence the publication of results contained in this manuscript. Authors must guarantee absence of contract relations or ownership rights, which could influence on publication of information presented in a manuscript.
