

The repeated monitoring of the article manuscript and answers for the remarks of reviewers

The repeated scientific retest of the article and preparation of answers made by an author for the remark of reviewers mean that the author must undertake the next steps:

1. To pay attention to all remarks, given by an editor and reviewer (-wers).
2. To conduct all additional experiments or carry out a retest, taking into account the analytical reasonings and recommendations of reviewers.
3. To comment on all changes, done in maintenance of the article, and send them as a reverse letter to electronic address: psycholing.journal@gmail.com
4. To provide a tolerant scientific answer on all debatable questions. To designate the points of remarks, which an author agrees with, and with which - no.
5. To mark clearly all changes in the article which were brought in at its revision (to distinguish by a color).
6. To turn the revised manuscript in a reverse letter in terms, set by an editor (-tors).
